

CribMaster Reports

CribMaster's powerful reporting capabilities, including more than 150 standard reports, make retrieving information fast and easy. CribMaster uses a report generation package that can be purchased at your local computer store. You can use this package to modify the standard CribMaster reports or generate new ones from scratch. All the CribMaster reports and your own customized reports can be printed, faxed or e-mailed to anyone in the world.

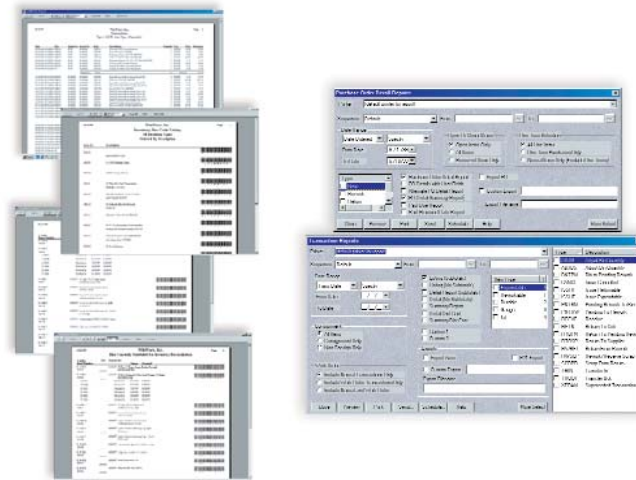

CribMaster Analyzer is a group of reports that will track how well your purchasing department and suppliers are doing their job. By tracking the value of inventory, number of stock outs and number of overstocked bins, you will be able to measure your internal purchasing performance. The Vendor Performance report will graph the number of on-time shipments as well as the average days to delivery. The Analyzer will help you become more efficient by providing you with important information about your inventory and supplier trends. The Order Point Analysis report will detail the difference between your min/max's and CribMaster's calculated order points and order quantities and suggest changes to your min/max's based on your usage and supply history.
